Data Management Plan workshop

Date
Tuesday July 28, 2020 2:00pm to 3:00pm

Description

The Ontario Agri-Food Innovation Alliance is committed to fostering sound data management practices to facilitate new agri-food and rural research.

To assist researchers with the development of a data management plan (DMP), the McLaughlin Library is leading a workshop to provide an overview of data management plans and discuss strategies and resources for completing a DMP.

Note: All researchers are welcome but there will be a focus on creating DMPs for projects funded by the Alliance and Food From Thought.

Register for this session (to be delivered via Microsoft Teams) by filling out the Registration Form. Once registered, an invitation will be sent to you with the meeting details.

As of 2018, researchers awarded funding through the Alliance research program must complete a DMP for their awarded project(s). A DMP summarizes how data generated over the course of a research project will be stored, shared and maintained. It can help improve the effectiveness and efficiency of a research project as well as help prepare data for preservation and sharing.
