Description

WSIB is seeking to fund one new award for a systematic review of the scientific evidence examining if occupational asbestos exposure causes gastro-intestinal cancers.

Specifically, the review must address:

- Gastro-intestinal cancers and the individual cancers (i.e. cancers of the esophagus, stomach, small bowel, colon and rectum)
- Individual types of asbestos (i.e. chrysotile, crocidolite, amosite, tremolite, actinolite and anthophyllite) where possible
- Identification of
 - Any dose-response relationships
 - Interdependent causes or synergistic relationships
 - Subgroups of workers who have an increased risk of developing gastrointestinal cancers and/or any of the individual cancers
- Examine any evidence for a minimum interval (latency) between the first exposure to asbestos and the diagnosis of gastrointestinal cancer and/or any of the individual cancers

Eligibility

The research team will require a minimum of three (3) team members including:

- At least one member with a Doctorate in Epidemiology
- At least one member who has formal training in toxicology or industry hygiene (Masters Level or PhD)
- At least one member of the team must have demonstrated experience conducting systematic reviews including meta-analyses related to disease etiology
